**Question:** If the 4<sup>th</sup>, 10<sup>th</sup> and 16<sup>th</sup> terms of a G.P. are x, y, and z, respectively. Prove that x, y, z are in G.P. **Solution:**

TABLE 0  
GIVEN INFORMATION

Symbol	Value	Description
$x$	$x(0) r^4$	$x(4)$
$y$	$x(0) r^{10}$	$x(10)$
$z$	$x(0) r^{16}$	$x(16)$
$r$	$y^{\frac{1}{6}} x^{-\frac{1}{6}}$	$\frac{x(n)}{x(n-1)}$
$x(0)$	$x^{\frac{5}{3}} y^{-\frac{2}{3}}$	First term
$x(n)$	$x(0) r^n u(n)$	General Term

1) From Table 0,

$$x = x(4) = x(0) r^4 \quad (1)$$

$$y = x(10) = x(0) r^{10} \quad (2)$$

$$z = x(16) = x(0) r^{16} \quad (3)$$

Consider  $\frac{x(10)}{x(4)}$  and  $\frac{x(16)}{x(10)}$ ;

$$\Rightarrow \frac{x(10)}{x(4)} = \frac{x(0) r^{10}}{x(0) r^4} = r^6 \quad (4)$$

$$\Rightarrow \frac{x(16)}{x(10)} = \frac{x(0) r^{16}}{x(0) r^{10}} = r^6 \quad (5)$$

From (4) and (5),  $x(4)$ ,  $x(10)$ ,  $x(16)$  are in G.P.

$\therefore x, y, z$  are in G.P.

2)  $x(0)$  and  $r$  can be expressed in terms of  $x, y$ , and  $z$  in the following manner.

$$\Rightarrow \frac{y}{x} = r^6 \quad (6)$$

$$\Rightarrow r = \sqrt[6]{\frac{y}{x}} = \left(\frac{y}{x}\right)^{\frac{1}{6}} \quad (7)$$

$$\Rightarrow x = x(0) r^4 \quad (8)$$

$$\Rightarrow x(0) = \frac{x}{r^4} \quad (9)$$

$$= x \left(\frac{x}{y}\right)^{\frac{4}{6}} \quad (10)$$

$$\therefore x(0) = x^{\frac{5}{3}} y^{-\frac{2}{3}} \text{ and } r = \left(\frac{y}{x}\right)^{\frac{1}{6}} = y^{\frac{1}{6}} x^{-\frac{1}{6}} \quad (11)$$

3) Z-transform:  $x(n) \xrightarrow{Z} X(z)$

$$X(z) = \sum_{n=-\infty}^{\infty} x(n) z^{-n} \quad (12)$$

$$X(z) = \frac{x(0)}{1 - rz^{-1}} \quad (13)$$

$$\text{ROC} = \{z : |z| > |r|\}$$

Substituting  $r$  and  $x(0)$  from (11),

$$X(z) = \frac{x^{\frac{5}{3}} y^{-\frac{2}{3}}}{1 - \left(\frac{y}{x}\right)^{\frac{1}{6}} z^{-1}} \quad (14)$$

4) Example

$$\text{Let } x(0) = \frac{1}{256} \text{ and } r = 2 \quad (15)$$

$$x = x(4) = x(0) r^4 = \frac{1}{256} (2)^4 = \frac{1}{16} \quad (16)$$

$$\Rightarrow x = \frac{1}{16} \quad (17)$$

$$y = x(10) = x(0) r^{10} = \frac{1}{256} (2)^{10} = 4 \quad (18)$$

$$\Rightarrow y = 4 \quad (19)$$

$$z = x(16) = x(0) r^{16} = \frac{1}{256} (2)^{16} = 256 \quad (20)$$

$$\Rightarrow z = 256 \quad (21)$$
