Question: If the 4^{th} , 10^{th} and 16^{th} terms of a G.P. are x, y, and z, respectively. Prove that x, y, z are in G.P.

Solution:

Symbol	Value	Description
x	$x(0) r^4$	x (4)
у	$x(0) r^{10}$	x(10)
Z	$x(0) r^{16}$	x(16)
r	?	$\frac{x(n)}{x(n-1)}$
x(0)	?	First term
x(n)	$x(0) r^n u(n)$	General Term

TABLE 0
GIVEN INFORMATION

1) From Table,

$$x = x(3) = x(0)r^{3}$$
 (1)

$$y = x(9) = x(0)r^9$$
 (2)

$$z = x(15) = x(0) r^{15}$$
 (3)

Consider $\frac{x(9)}{x(3)}$ and $\frac{x(15)}{x(9)}$;

$$\frac{x(9)}{x(3)} = \frac{x(0)r^9}{x(0)r^3} = r^6 = \frac{x(15)}{x(9)} = \frac{x(0)r^{15}}{x(0)r^9}$$
 (4)

From (4), x(3), x(9), x(15) are in G.P. $\therefore x, y, z$ are in G.P.

2) x(0) and r can be expressed in terms of x, y, and z in the following manner.

$$\frac{y}{x} = r^6 \tag{5}$$

$$\Longrightarrow r = \sqrt[6]{\frac{y}{x}} = \left(\frac{y}{x}\right)^{\frac{1}{6}} \tag{6}$$

$$\Longrightarrow x(0) = \frac{x}{r^3} = x \left(\frac{x}{y}\right)^{\frac{3}{6}} \tag{7}$$

$$\therefore x(0) = x^{\frac{5}{3}} y^{-\frac{2}{3}} \text{ and } r = \left(\frac{y}{x}\right)^{\frac{1}{6}} = y^{\frac{1}{6}} x^{-\frac{1}{6}}$$
 (8)

3) From (??) Z-transform of a G.P. is

$$X(z) = \frac{x(0)}{1 - rz^{-1}}; |z| > |r|$$
 (9)

Substituting r and x(0) from (8),

$$X(z) = \frac{x^{\frac{5}{3}}y^{-\frac{2}{3}}}{1 - \left(\frac{y}{x}\right)^{\frac{1}{6}}z^{-1}}$$
(10)

4) Example Let x(0) = 1 and r = 1.2

$$x = x(3) = (1.2)^3$$
 (11)

$$y = x(9) = = (1.2)^9$$
 (12)

$$z = x(15) = (1.2)^{15}$$
 (13)
